STEPHEN MCNAMARA

Full Stack JavaScript Software Developer

SUMMARY

I've been excited about computers all my life. I built my first computer in high school and fell in love with the hardware aspect. After learning how to write programs to run on that hardware, I found my passion. I'm eager to work in a fast paced environment that encourages teaching and challenges my abilities.

TECHNICAL SKILLS

FRONT END

JavaScript	HTML	jQuery
CSS	React	React Native
Redux	AJAX	SASS/LESS
Webpack		

BACK END

Node.js	Express.js	MongoDB

EDUCATION

Origin Code Academy
Full Stack JavaScript Software Developer
2018

Cisco Networking Academy
COMPTIA A+ IT Essentials
2017

ROP Computer Repair Course
PC Troubleshooting & Hardware Repair
2007

PROJECTS

The Portal

A hiring website dedicated to marketing junior software developers to potential employers.

- Created a fluid frontend with React and Redux.
- Used Bootstrap and CSS for styling.
- Created a secure backend with Loopback through MongoDB.
- Communicated data between the frontend and backend through Axios.
- Utilized Git for workflow and version control.
- Ran CircleCI for continuous integration and check for full functionality.
- Performed unit & e2e tests using Mocha, Chai, and Nightmare.

SDJS App

An app on Android and iOS for people who are interested in being involved within the JavaScript community in San Diego.

- Created a flexible frontend with React Native and Redux.
- Styled across both platforms, as well as for specific platforms using React Native styling.
- Created a secure backend Loopback through MongoDB.
- Communicated data between the frontend and backend with Axios and Passport.
- Utilized Git for version control and workflow.
- Ran CircleCI for continuous integration and check for full functionality.
- Performed unit tests using Mocha and Chai.

Hackathon

A movie catalog website that shows details about upcoming films and provides a review article from the New York Times.

- Created a pleasing frontend using React and ReactDOM.
- Stylized with CSS.
- Made API calls with Axios to retrieve data from the New York Times and The Movie Database.
- Used Git to deploy application through Heroku.
